The mobile rack is used for storing and providing goods in euro containers.

The mobile rack for Euro containers is made of stainless steel and is designed for the comfortable transport and storage of goods in Euro containers. The mobile rack is equipped with L-profile insertion rails and impresses with a simple and ergonomic retrieval of the stored goods. The continuous roof made of stainless steel protects the stored goods from environmental influences, such as condensation. The fixed welded support pins in the rack stands allow for easy hanging of the corresponding L-profile insertion rails. The height-adjustable insertion rails ensure convenient placement of the Euro containers and easy access. A raised edge on the insertion rails secures the Euro containers at the back and prevents accidental falling out. High-quality, corrosion-resistant swivel castors with a plastic housing enable smooth movement and precise manoeuvring. The materials used are sustainable, 100% recyclable, and so valuable that Hupfer guarantees to buy back your entire rack at the end of its service life.

- Height-adjustable L-profile slide rails allow for convenient placement of Euro containers and easy access - Roof for hygienic protection against environmental influences - Swivel castors ensure smooth movement and precise manoeuvring - Total brakes guarantee safe driving and securing - Quality workmanship from high-quality stainless steel enables easy cleaning and perfect hygiene - Valuable materials ensure sustainability and value retention
