Hook trolley for transport and storage of surgery steps and other items suitable for being attached to hook trolleys.

Trolley made entirely of high-quality stainless steel, robust, self-supporting and hygienic design. Tubular frame rack made of square tubes with curved corners, with three welded hook pairs on one side in the lower section for attaching standard depositing trays with continuous upstand and for placing surgery steps in a vertical position. Above, on both sides, two hook pairs each, for additional attachment parts. The frame is twisted between the lower and upper sections, so any attached items remain within the trolley's contours on both sides. For this reason there is no increased risk of tilting even when loaded unevenly. 4 polyethylene disc bumpers serve as bumpers and protect trolley including any attached parts on all sides as well as building-side walls from being damaged. Trolley runs on 4 swivel casters of which 2 with total locks, with back-hole fastening.
