The open hook trolley is used for transporting and providing medical supplies in accessories attached to it.

The stainless steel open hook trolley is used for convenient transport and user-friendly organisation of medical supplies in accessories attached to it. The Hupfer hook trolley ensures easy handling and efficient transport processes in any medical working environment. The all-round welded frame made of stainless steel square tube with curved upper corners is particularly torsion-resistant and robust. The frame also serves as a push bar and allows the accessories to be easily attached in the configuration required. Firmly welded pairs of hooks make it easy to attach appropriate accessories such as sterile goods baskets. Thus equipped, the hook trolley allows quick access and a clear overview of the supplies to be provided. The high-quality design guarantees optimum hygiene for demanding environments. The base of the trolley made of square tube with rounded corners and four swivel castors with two locks ensures smooth movement and precise manoeuvring. The hook trolley is available in different versions, with single, double and triple side loading, each with different capacities.

- Open stainless steel frame construction ensures quick accessibility and user-friendly organisation
- Firmly welded pairs of hooks allow effortless hanging of accessories and flexible, needs-based equipment
- Torsion-resistant frame construction serves as a stable push handle for comfortable manoeuvring
