The sink is used for the pre-cleaning of medical instruments.

The freestanding sink table made of high-quality stainless steel is designed for the thorough pre-cleaning of medical instruments. The Hupfer sink table is a central component in hospitals, laboratories, practices, and other medical fields. The welded, open frame construction made of stainless steel square tubing is torsionally rigid and robust. The all-around edge bending and the rear upstand of the rinsing and work surface ensure easy cleaning and perfect hygiene. The underlay of the work surface provides vibration-free stability and dampens potential operational noise. Height-adjustable plastic feet allow for compensation of potential floor unevenness and ensure a secure stand. A loosely suspended and removable lower wire rack serves as a convenient shelf and provides good ventilation and quick drying of the placed items. The sink table is available with one, two, or three sink basins of different dimensions and optional cabinet bases. For individual, special requirements such as hollow instruments, various fittings and spray taps with water or air pressure are available.

- Welded construction ensures torsional rigidity and robustness - Reinforcement of the wash and work surface provides vibration-free stability and dampened working noises - All-round edging guarantees easy cleaning and perfect hygiene - Height-adjustable feet allow for compensation of potential floor unevenness and ensure stability - Additional options allow for expansion and adaptation to individual requirements
