

Platform stacker BPN/4-P - unheated

- for stacking, transportation and temporary storage of standardised china items.

The BPN series platform stacker has been especially developed for standardised china items. The recessed platform, tailored to hold standardised china items, therefore ensures optimal storage and transportation options. Up to 340 1/1 bowls or subdivisions thereof can therefore be optimally accommodated.

The platform stacker made from rust-proof stainless steel has a removable stacking platform. This allows access to the internal space of the transport and stacking trolley when required e.g. for cleaning purposes. The advantage of the BPN model is that it can be used in all kinds of situations to hold the widest variety of standardised china items in sizes 1/1, 1/2 and 1/4 PN.

Using the one BPN model, rectangular standardised china items can therefore be stacked, transported and temporarily stored in a way which makes optimum use of its capacity.

Holding capacity for up to 592 1/4 PN china items.

Holding capacity for up to 296 1/2 PN china items or for a capacity of 408 1/2 PN narrow food trays.

Holding capacity for up to 340 1/1 PN plates.
