

Silicone storage elements

- for storing, securing and transporting surgical instruments!

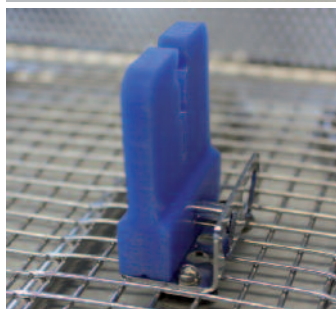

Transporting valuable surgical instruments between the central sterilisation unit and the operating theatre is the most frequent cause of damage. HUPFER® silicone storage elements allow you to secure your surgical instruments stored in sterilisation trays against shifting and falling out. This keeps your surgical instruments in place during rinsing and safe from damage during the operating procedure.

To ensure maximum protection for your valuable surgical instruments through-out the operating cycle, HUPFER® provides you with the right solution.

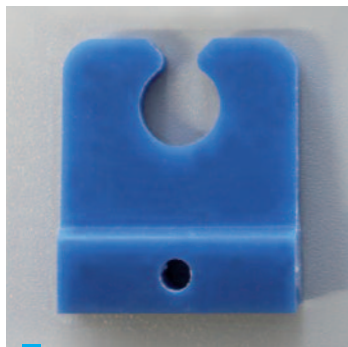

Advantages and benefits in overview

- Universal storage elements made of silicone provide optimum hold for your surgical instruments and prevent them from shifting and falling out.
- Can be individually attached to the bottom of a sterilisation tray by means of screws.
- Different cut-outs permit gentle storage in accordance with the thickness of the surgical instruments.
- The flat screw-in elements on the outside provide additional protection of soft/fleece packaging from perforation and breakage.
- Different customised arrangements and lengths within the sterilisation trays are possible.

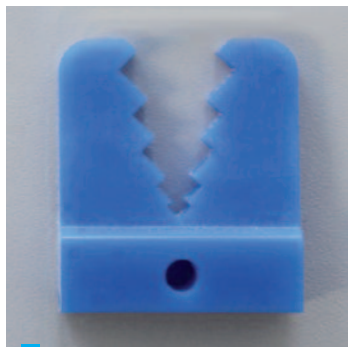

Design

- Screwed-in universal fixation made of stainless steel.
- Silicone cut-outs.
- Dimensions W x D x H 35 x 14 x 41 mm
- Set of four.
