we make work flow

CLEAR STERILE GOODS TRANSPORT

The new hook trolley solution from Hupfer.

www.hupfer.com

compact - agile - clear

PROPER TOP PERFORMANCE

As a specialist in sterile goods logistics, we at HUPFER work to optimise your process chain to the maximum. In particular, the area of the reprocessing unit for medical devices today has to master quantitative and qualitative tasks that require a **smooth organisation**.

HUPFER offers the perfect solution for this with the combination of our hook trolley and our new option for holding sieve baskets, sterile goods containers and sterile goods baskets. The **compact comprehensive package** can be conveniently moved between the individual stations of the reprocessing unit without losing track of the transported goods.

- low space requirement
- agile application
- eliminated intermediate storage
- increased process speed
- continuous clarity
- less work steps

The three stations at the washer-disinfector (WD), packing table and steriliser are passed through **without time-consuming repacking of the goods**. In this way, you not only operate with maximum transparency, but also increase the speed of your processes.

The new wire bracket (art.-no. 7500375) is compatible with all our hook trolleys, hook rails and wall hook rails on offer.

You can find further combination options and attachments on our homepage.
