ALUMINIUM TRAY CLEARING TROLLEYS - TAWALU

TAWALU from HUPFER® ...

...tray clearing trolleys for space-saving storage and smooth return transport!

TAWALU-1/13 GN for up to 13 GN trays, fitted with a vertical guard of stainless steel, which stops trays being pushed right through and can be additionally supplied for all models.

TAWALU-2/26 GN for up to 26 GN trays.

An ergonomic aluminium handle can be supplied as a special fitting from our accessories range.

The TAWALU series tray clearing trolleys from HUPFER® can be of optimal use wherever the smooth and efficient return of crockery is required. The TAWALU range of equipment is much in demand in commercial kitchen operations everywhere, whether in catering within the community, self-service restaurants, cafeterias or similar restaurants.

The wide range of equipment supplied, including more than 120 models, enables the demands and requirements of every operation always to be met in the best possible way. Our aluminium tray clearing trolleys are suitable for GN, EN, universal or even trapezoidal trays.

Classic design...

...the greatest practicality for diners and maximum benefits for kitchen staff!

TAWALU-2/26 GN, fitted with mesh grating-bottle stand, available from our range of accessories, for GN containers 1/1 or polycarbonate containers GN 1/1. These combinations are a perfect additional for bottles and glasses.

As with all products with the HUPFER® mark the greatest attention has been given in designing the TAWALU range to maximise user benefits such as hygiene, ease of cleaning and the simplification of operations and the flow of items. The torsion-resistant structure of our trolleys is of light anodised aluminium. The special profiles ensure the highest load-bearing capacity while allowing the trolleys to be moved with the minimum of effort.

The simple, classically functional design makes the trolleys especially suitable for use where they are in full view. Of course, the side and rear walls can be produced with different decoration of colours - HUPFER® tray clearing trolleys therefore fit attractively into any surroundings.

Closed-sided models...

...high-quality appearance but suitable for maximum daily usage!

TAWALU-2/36 GN with clear acrylic doors, closed on all sides, can hold up to 36 GN trays.

TAWALU-1/10 EN with clear acrylic door, closed on all sides. Additionally fitted with the perforated aluminium sheet side walls from our accessories range. Holds up to 10 EN trays.

The doors can open to 270°.

Our TAWALU models, with a rear wall and clear acrylic doors, have a particularly high-quality overall appearance. This range of products is closed on all sides and is therefore very hygienic for use in the day-to-day handling of used crockery. The doors can swing through 270°. The door hinges are positioned in the area protected by the standard bumpers - thus avoiding damage.

In place of the standard side and rear wall panels the trolleys can, if desired - and for an additional charge - also be fitted with side and rear walls of perforated aluminium sheet - this really gives an exclusive appearance to the dining area.

Easy to clean...

...with a high-quality finish for maximum hygiene!

Perfectly fitted side walls give optimum ease of cleaning.

Aluminium profiles closed with no gaps or seams make easy daily cleaning, thereby ensuring compliance with the strict hygiene requirements in commercial kitchens.

All HUPFER® TAWALU models are fitted with tray racks made from stainless steel - for maximum ease of cleaning combined with maximum durability. The tray racks fit with absolute precision into the frame thus permitting excellent cleaning even in those areas which usually pose so many problems. The brackets forming the rack are designed also to act as a guard which stops trays being pushed right through. Standard distances between trays are 75, 100, 125, 150 or 175 mm depending on the model.

The stable tubular frame structure consists of aluminium special profiles of a registered design - the neatly fitting side walls are easy to clean. These are two excellent benefits in terms of quality and operation in relation to the strict hygiene requirements for commercial kitchens.

Optimal handling...

...even when the HUPFER® tray clearing trolleys are fully loaded!

The ergonomically designed TAWALU offers optimal handling properties even when fully loaded.

A wide selection of fitting options makes the HUPFER® TAWALU tray cleaning trolleys adaptable to the broadest range of user demands and requirements in commercial kitchens. Every need can be met by our range of fittings and accessories starting with the basket to be placed on top, the handle which can be added the barrier rail with the trolley top made from stainless steel, the mesh grating-bottle stand, the special

polycarbonate containers and the guard to stop trays being pushed right through.

With us you have your process chain under control!**

Standard rust-proof castors, galvanised-chrome housing, plastic wheel and slide bearing.

Rust-proof plastic castor with ball bearing, suitable for wet areas. Attachment made from stainless steel.

Rust-proof castor with plastic wheel and extremely smooth running surface, ball bearing-mounted in galvanised-chromate housing. This type of castor ensures minimum travel noise and is particularly suitable for running over uneven floors.

Equipment details and accessories...

...the HUPFER® TAWALU models can be adapted to all possible requirements!

All TAWALU models are fitted as standard with rotatable bumpers. These not only protect the trolley and its contents from damage but also prevent walls being marked by abrasion of plastic material. The door hinges are positioned in the area protected by the bumpers. The standard castor arrangement consists of 4 steering rollers in corrosion-proof housings, 2 of them having brakes, Ø 125 mm.

Our accessories include a bottle grating made from stainless steel. When used with a GN 1/1 container up to 15 bottles can be safely transported on a countersunk trolley top.

In order to make the best possible use of the top surface of our TAWALU models the 1-part and 2-part variations can be supplied with a top made from stainless steel, which can be inserted flush and has an integrated barrier rail.

A guard to stop trays being pushed right through can be supplied to prevent breakages during transport.

A plastic-coated crockery basket can be supplied as an added extra for all models.
