

**Accessories and fixings for immersion trays and baskets ■**  
**1-2-3-Rack®**

## Cleaning, sterilising and laying out instruments - simpler and smoother sterile goods logistics with the 1-2-3-Rack® from HUPFER®

Cleaning the fixed instruments in the 1-2-3-Rack®.

Preparation for instrument sterilisation in the 1-2-3-Rack®.

Laying out instruments easily and quickly using the 1-2-3-Rack®.

The 1-2-3-Rack® is a concrete demonstration - in an actual product - of HUPFER®'s highly innovative approach. Its numerous features which make the instrument cycle simpler, safer and more rapid speak for themselves. It is no longer necessary to remove the instruments from the 1-2-3-Rack® in order to clean them. The instruments remain fixed during the washing procedure and cannot be damaged during the working procedure. The immersion basket with the 1-2-3-Rack® therefore no longer needs to be closed by a cover. The sterilisation procedure is also simplified. Using the 1-2-3-Rack® to lay out instruments opens the door to further benefits. The 1-2-3-Rack® together with all the instruments is thus removed from the immersion basket as a whole. The instruments are all released for use by releasing the retainer. The retainer is so simple to remove that all the instruments can also be released using just one hand. Conversely, the instruments can be fixed very securely by the retainer, even when the instruments are of different diameters. This is achieved by a flexible silicone lip and the double latches in which the retainer is guided. The silicone strip works together with the retainer to hold the instruments securely and in a stable position. Valuable instruments are thus given maximum protection throughout the working cycle. The fixings in the 1-2-3-Rack® can be combined with each other and infinitely adjusted individually to accommodate instruments of different lengths. The fact that the 1-2-3-Rack® comes in seven different adjustable models means that the majority of all commercial instruments can be fixed in them.

Numerous benefits leading to quicker and simpler procedures -  
the 1-2-3-Rack® from HUPFER® is full of impressive features!

**Simple**  
The 1-2-3-Rack® retainers are very easy to release and thus release the instruments very quickly.

**Adaptable**  
The retainers which fix the instruments mean that even instruments of different diameters can be held securely.

**Secure guidance**  
The double latch arrangement guides the retainers securely to the instruments to be fixed.

**Precise positioning**  
Guide bolts attached to the immersion basket permit precise insertion of the 1-2-3-Rack®.

**Easy maintenance**  
The silicone lips on the retainers can be changed easily and quickly without the need for additional tools.

**Individual**  
Thanks to its construction the 1-2-3-Rack® can be permanently connected to an immersion basket by screws.

**Variable**  
The fixing elements can be infinitely adjusted to an extremely wide range of instrument lengths.

**Secure storage**  
The lower silicone strips fix the instruments at each side and thus keep them apart.
