

The DaVinci basket made from stainless steel - The endoscope basket to protect the sensitive optic of the DaVinci system!

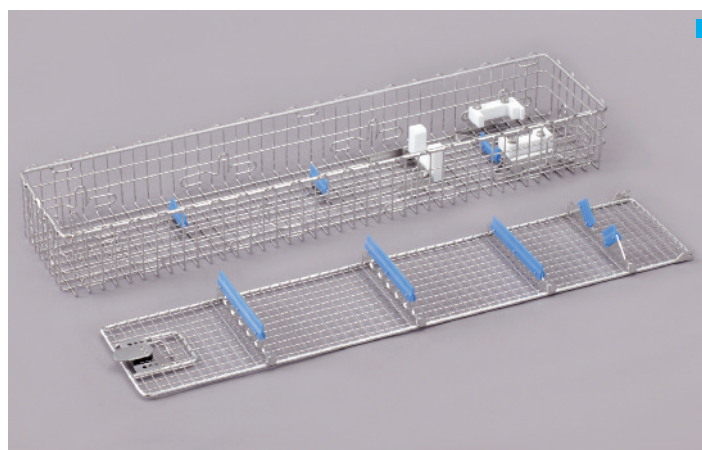

The DaVinci basket is the optimum solution for washing, storing and protecting the sensitive optic of the DaVinci system. The optic is put into a fixing device especially manufactured for this purpose. Holding down clamps fixed to the cover of the basket fix and protect the optic in an optimum way against slipping and damages during the whole circuit. The cover is equipped with a special rotary fastener which is easy to be handled and protected against independent opening.

Like all HUPFER® endoscope baskets the DaVinci basket also has a user-friendly design and effectively protects expensive instruments.

Advantages and benefits in overview

- A smooth contour avoids damage to the packing materials.
- Optimum cleaning characteristics due to a wire construction easily to be cleaned.
- Optimum adapted fixing device due to replaceable silicon benches and holding down devices.
- The basket including the fixing devices is suitable for both steriliser and cleaning and disinfection unit.

In Order to protect the instruments the holding device for the ocular is designed in a particularly solid way. There also is a guiding for the cable of the fibre-optic in the basket.
