<b>Высота:</b>	1865 мм

Показан пример без декоративных элементов,  
точность технического описания не  
гарантируется.

Push-through protection made of electropolished stainless-steel.

The push-through safety device for shelving units in the form of a stainless steel grid serves to secure the stored goods laterally. The Hupfer push-through safety device for shelving units is a robust and reliable safety device for maximum safety and efficiency in your warehouse. The cleverly designed construction allows for effortless and optional hanging and removal of the stainless steel grid in the shelving unit. The push-through safety device is space-saving and enables the storage area to continue being used efficiently. The stainless steel grid is electrolytically polished and particularly durable, easy to care for, long-lasting, and maintenance-free.
